Supplemental Information for

A Computational Model of Message Sensation Value in Short Video Multimodal Features that Predicts Sensory and Behavioral Engagement

Table S1. Summary statistics of short videos by issue and account popularity.

Issue	**N**	**$N_{account}$**	**Duration (s)**	**#View**	**#Like**	**#Comment**
Alternative medicine	155	15	25.86	1200644.60	109448.31	833.57
Climate change	188	25	56.79	402720.50	54906.28	457.43
COVID-19	280	20	35.73	2408484.90	208814.56	4883.89
Presidential election	150	13	31.29	164893.70	24441.28	1007.89
GMO	236	16	33.12	1736174.30	132133.65	5018.76
Health	150	24	38.90	197741.20	14020.91	120.83
Russian-Ukraine conflict	182	24	47.64	484576.30	70221.91	493.68
Vaccination	296	32	37.50	1524542.70	116390.26	4259.48
Popularity	**N**	**$N_{account}$**	**Duration (s)**	**#View**	**#Like**	**#Comment**
Popular	800	110	32.30	1082807.12	102653.69	2122.58
Unpopular	400	43	54.29	3945.82	381.59	18.38

Table S2. The variance inflation factor (VIF) of multimodal features in regression models. A VIF above 2 represents moderate collinearity. The normal features include video length as an additional multimodal feature. The standardized features have shot count, shot duration, face count, and face duration standardized by video length.

Features (normal)	VIF	Features (standardized)	VIF
Video length	**2.27**	-	
Brightness	1.08	Brightness	1.08
Color saturation	1.10	Color saturation	1.10
Color warmness	1.42	Color warmness	1.41
Visual complexity	1.34	Visual complexity	1.37
Loudness	1.04	Loudness	1.07
Tempo	1.09	Tempo	1.09
Sound brightness	1.11	Sound brightness	1.11
Face age	1.12	Face age	1.09
Face gender	1.26	Face gender	1.24
Face size	1.23	Face size	1.25
Disgust	1.05	Disgust	1.06
Anger	1.10	Anger	1.11
Fear	1.05	Fear	1.05
Happiness	1.33	Happiness	1.36
Sadness	1.12	Sadness	1.12
Surprise	1.15	Surprise	1.15
Face count	1.49	Face count/s	1.16
Face duration	1.62	Face duration/s	1.71
Shot count	1.92	Shot count/s	1.49
Shot duration	**2.17**	Shot duration/s	1.99

Table S3. Demographics of participants (N = 1007) in the evaluation of Perceived Message Sensation Value of short videos (N = 1200).

Demographic Characteristics		Frequency	Percent
Gender	Female	510	50.6%
	Male	472	46.9%
	Non-binary	19	1.9%
Age, mean (SD)		41.0 (13.9)	-
Race	Asian	277	27.5%
	White	191	19.0%
	Black	36	3.6%
	Hispanic	184	18.3%
Education	Some high school or less	8	0.8%
	High School/GED	111	11.0%
	Some college no degree	235	23.3%
	Associates /technical degree	117	11.6%
	Bachelor's degree	374	37.1%
	Graduate/professional degree	158	15.7%
Income	<$25,000	155	15.4%
	$25,000–$49,999	251	24.9%
	$50,000–$74,999	212	21.1%
	$75,000–$99,999	130	12.9%
	$100,000–$149,999	142	14.1%
	≥$150,000	82	8.1%

Table S4. The measure of Perceived Message Sensation Value (Palmgreen et al., 2002).

Dimensions	**Items (1–7)**
Emotional arousal	Emotional–unemotional Arousing–not arousing Involving–uninvolving Exciting–boring Powerful impact–weak impact Stimulating–not stimulating Strong visuals–weak visuals Strong sound effects–weak sound effects
Dramatic impact	Dramatic–undramatic Graphic–not graphic Creative–not creative Didn't give me goosebumps–gave me goosebumps Intense–not intense Strong soundtrack–weak soundtrack
Novelty	Novel–ordinary Unique–common Unusual–usual

Table S5. The brief sensation-seeking scale (Hoyle et al., 2002).

#	Question item	Response
1	I would like to explore strange places.	1 = Strongly disagree 7 = Strongly agree
2	I would like to take off on a trip with no pre-planned routes or timetables.	
3	I get restless when I spend too much time at home.	
4	I prefer friends who are excitingly unpredictable.	
5	I like to do frightening things.	
6	I would like to try bungee jumping.	
7	I like wild parties.	
8	I would love to have new and exciting experiences, even if they are illegal.	

Table S6. Five sets of multimodal features.

#	Feature set 1 All features	Feature set 2 Correlation	Feature set 3 Stepwise	Feature set 4 PLS	Feature set 5 Audiovisual
1	Brightness	Brightness	Brightness	Brightness	Brightness
2	Color saturation				Color saturation
3	Color warmness				Color warmness
4	Visual complexity			Visual complexity	Visual complexity
5	Loudness	Loudness			Loudness
6	Tempo				Tempo
7	Sound brightness	Sound brightness	Sound brightness	Sound brightness	Sound brightness
8	Face age	Face age		Face age	
9	Face gender				
10	Face size	Face size			
11	Disgust	Disgust			
12	Anger	Anger	Anger	Anger	
13	Fear	Fear			
14	Happiness				
15	Sadness	Sadness			
16	Surprise				
17	Face count/s	Face count/s			Face count/s
18	Face duration/s	Face duration/s	Face duration/s	Face duration/s	Face duration/s
19	Shot count/s	Shot count/s			Shot count/s
20	Shot duration/s	Shot duration/s	Shot duration/s	Shot duration/s	Shot duration/s

Table S7. The correlation between multimodal features and Perceived Message Sensation Value.

#	Multimodality	Category	Multimodal feature		r	p
1	Visual	Static Visual	Brightness		-0.15	<.001***
2			Color saturation		0.03	0.262
3			Color warmness		-0.02	0.600
4			Visual complexity		0.01	0.670
5		Dynamic Visual	Shot count/s		0.11	<.001***
6			Shot duration/s		-0.27	<.001***
7		Static Face	Face age		0.08	0.006**
8			Face gender (female)		-0.04	0.236
9			Face size		-0.11	0.001**
10			Facial expression	Disgust	0.08	0.005**
11				Anger	0.10	0.002**
12				Fear	0.12	<.001***
13				Happiness	-0.03	0.290
14				Sadness	0.12	<.001***
15				Surprise	0.02	0.527
16		Dynamic Face	Face count/s		0.08	0.005**
17			Face duration/s		-0.39	<.001***
18	Audio		Loudness		0.09	0.002**
19			Tempo		0.02	0.469
20			Sound brightness		-0.07	0.020*

Table S8. Feature importance scores of multimodal features in predicting PMSV in partial linear square regression.

#	Multimodal feature	Feature importance
1	Visual complexity	**0.06**
2	Anger	**0.04**
3	Face age	**0.04**
4	Surprise	0.03
5	Tempo	0.02
6	Sadness	0.02
7	Loudness	0.02
8	Face gender	0.01
9	Disgust	0.00
10	Fear	0.00
11	Color saturation	-0.01
12	Face count/s	-0.01
13	Shot count/s	-0.02
14	Happiness	-0.02
15	Color warmness	-0.03
16	Face size	-0.04
17	Brightness	**-0.08**
18	Sound brightness	**-0.09**
19	Shot duration/s	**-0.14**
20	Face duration/s	**-0.21**

Table S9. MSE and AIC of models predicting PMSV (i.e., sensory engagement) with multimodal features. The baseline of MSE is 0.664.

Feature set (#features)	MSE (AIC)				
	Linear	Polynomial	Random Forest	XGBoost	Support Vector
All features (20)	0.561 (-29.382)	0.710 (-1.108)	0.489 (-45.831)	0.499 (-43.439)	0.655 (-10.841)
Correlation (13)	0.576 (-40.277)	0.580 (-39.309)	0.511 (-54.472)	0.482 (-61.640)	0.662 (-23.424)
Stepwise (5)	0.578 (-55.745)	0.540 (-64.051)	0.500 (-73.120)	0.491 (-75.397)	0.664 (-39.226)
PLS (7)	0.582 (-50.870)	0.530 (-62.277)	0.499 (-69.302)	0.508 (-67.358)	0.665 (-35.012)
Audiovisual (11)	0.558 (-47.940)	0.538 (-52.315)	**0.448 (-74.309)**	0.476 (-66.970)	0.491 (-63.266)

Table S10. Feature importance of 11 multimodal features in the feature set 5 in the random forest regression model.

Feature	Importance
Face duration/s	0.25
Shot duration/s	0.18
Brightness	0.09
Shot count/s	0.08
Visual complexity	0.07
Sound brightness	0.07
Color warmness	0.06
Color saturation	0.06
Face count/s	0.06
Tempo	0.05
Loudness	0.04

Table S11. Average MSE of models predicting PMSV (i.e., sensory engagement) with multimodal features in 10-fold cross-validation. The baseline of MSE is 0.664.

Feature selection	#Features	MSE (AIC)				
		Linear	Polynomial	Random Forest	XGBoost	Support Vector
All features	20	0.573	0.798	0.530	0.526	0.639
Correlation	13	0.575	0.612	0.528	0.523	0.638
Stepwise	5	0.577	0.564	0.534	0.529	0.638
PLS	7	0.574	0.583	0.532	0.522	0.638
Audiovisual	11	0.576	0.589	**0.517**	0.519	0.552

Table S21. Summary statistics of video engagement (i.e., behavioral engagement), video duration, and computational MSV for short videos across datasets and platforms. These two datasets of short videos were collected in October 2023: (a) science-related short videos on TikTok and (b) short videos recommended to children on TikTok, Instagram Reels, and YouTube Shorts. The first dataset includes short videos about vaccines and climate change on TikTok (n = 10,000). We identified ten trending hashtags for each issue with both stances considered and used the TikTok Research API (TikTok, 2024) to retrieve videos with these hashtags from January 2020 to September 2023 (n = 103,888). After removing duplicates, n = 96,242 short videos remained, from which a stratified sample of n = 10,000 was drawn. This sample includes n = 6520 vaccine-related videos ($n_{pro\text{-}vaccine}$ = 4181, $n_{anti\text{-}vaccine}$ = 2339) and n = 3480 climate change-related videos ($n_{pro\text{-}climate\ action}$ = 3319, $n_{anti\text{-}climate\ action}$ = 161). The second dataset includes n = 4492 short videos recommended to child profiles on TikTok (n = 2686), Instagram Reels (n = 810), and YouTube Shorts (n = 996) in an algorithm audition study (Hilbert et al., 2025; Xue et al., 2025). Hilbert and colleagues gathered short videos recommended for children profiles with various demographics.
